

# SPRINGFIELD CARP

## CLIMATE ACTION & RESILIENCE PLAN

Climate Change and pollution are affecting our community, bringing hotter summers, wetter winters, increased risks of violent storms, and threats to our public health such as increased asthma rates.

The City of Springfield is doing something about that: writing a Climate Action and Resiliency Plan. This plan of action will better prepare and protect our neighborhoods from the effects of climate change, lay out steps to bring down pollution across our city, and ensure climate justice by making sure communities that have been most impacted by pollution and climate change benefit from the plan.

To do this, WE NEED YOUR HELP. Come out to learn more about the plan, and tell us what you think should be included in it to improve the environment in your neighborhood. We want to hear from you to make this the best plan of action it can be!

## THREE OPPORTUNITIES TO BE HEARD
